Abstracts

The global Abortion Suction Machine market size is expected to reach \$ 143 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032). Aspiration aspirators are medical devices used for negative pressure aspiration of the uterine cavity. They remove pregnancy tissue or uterine contents through controlled negative pressure and a suction tube/head. Applications include induced abortion, curettage of missed/incomplete abortions, and some postpartum uterine cavity management. Emphasis is placed on stable negative pressure, controllable flow, and safe backflow prevention.

Upstream: Vacuum pumps/motors, negative pressure sensors and valves, control circuits, power batteries, suction bottles and filters, silicone tubing, disposable suction tubes/cervical dilation consumables, medical plastics and sterilization packaging.

Downstream: Hospital obstetrics and gynecology departments, family planning clinics, day surgery centers, primary care clinics, and emergency abortion procedures.

In 2025, the global unit price of aspiration aspirators was \$505, with sales of 195,000 units and a global annual production capacity of approximately 200,000 units. The industry profit margin was 20-25%.

Global Market Future Development Trends:

First, safety and standardization are driving upgrades. Countries are placing greater emphasis on aseptic technique and complication control, leading to equipment evolution towards negative pressure closed-loop control, overload protection, backflow prevention, and alarm linkage. Standardized training and clinical pathways improve usability at the grassroots level, driving upgrades.

Second, product forms are becoming more lightweight and portable. Electric integrated machines, low-noise, high-efficiency pumps, rechargeable devices, and mobile cart solutions are gaining popularity, adapting to outpatient/day surgery and patient transport. Combined with ultrasound guidance and disposable consumable kits,

efficiency is improved and the risk of cross-infection is reduced.

Third, demand is diversifying. While the increased proportion of medical abortion in some markets is suppressing some growth, stable demand is driven by the management of abortion complications, curettage of missed/incomplete abortions, postpartum uterine management, and the expansion of medical services to lower-tier cities. Emerging markets continue to grow due to the expansion of maternal and child health systems, improved payment methods, and compliant procurement.
