Abrasive brush roller is a key component used in PCB (printed circuit board) manufacturing and other industrial surface treatment. It consists of brush filaments and cores, and is used to clean, deburr and roughen the surface of materials. Its characteristics are that the brush filaments are made of various materials. According to different processing requirements, materials such as nylon, PVA or ceramic can be selected, and brush filaments containing different abrasives can achieve different degrees of grinding effects. The abrasive brush roller runs stably, can provide uniform surface treatment quality, and is easy to replace and has low maintenance costs. Its advantages are reflected in the efficient removal of surface impurities and the improvement of material surface adhesion. At the same time, it has strong adaptability and can meet the high standards of surface treatment accuracy and efficiency in different industries.
