Abstracts

The global Abrasive Jet Cutters market size is expected to reach \$ 951 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

In 2025, global sales of Abrasive Jet Cutters reached approximately 4,100?4,500 units, with an average market price of about USD 150000?165000 unit, an annual production capacity of roughly 4,500?4,900units, and an industry-average gross margin of approximately 35%.

An Abrasive Jet Cutter is a CNC-based cold-cutting system that uses an ultra-high-pressure stream of water combined with abrasive media to generate a high-energy erosive jet for cutting metals, stone, glass, ceramics, composites, and other hard, heat-sensitive, or thick-section materials. Typical product forms include bridge, gantry, cantilever, enclosed compact, bevel/5-axis, and robotic-integrated systems. A complete machine normally combines a high-pressure pump, cutting head, abrasive delivery unit, motion platform, CNC control, and process software. The core value proposition of this equipment lies in no heat-affected zone, broad material compatibility, complex contour capability, and strong fit with high-mix, low-volume, precision, and value-added manufacturing environments.

This report studies the global Abrasive Jet Cutters production, demand, key manufacturers, and key regions.
