Abstracts

Sand paper or abrasive paper is generic names used for a type of coated abrasive that consists of sheets of paper with abrasive material glued to one face. Despite the use of the names neither sand nor glass are now used in the manufacture of these products as they have been replaced by other abrasives. Sand Paper is produced in different grit sizes and is used to remove small amounts of material from surfaces, either to make them smoother (for example, in painting and wood finishing), to remove a layer of material (such as old paint), or sometimes to make the surface rougher (for example, as a preparation for gluing).

Scope of the Report:

This report focuses on the Abrasive Paper in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

At present, the global market is dominated by Europe and China. China is the world's largest production area. In 2016, China hold 30.19% of the global share of production. However, China's products prices are relatively low. At the same time, China's products are relatively low-end. High-end products are mainly occupied by manufacturers in Europe and the United States. At present, China is the world's major exporting countries. Southeast Asia and India import Chinese products. Europe is the world's second largest production area.

The worldwide market for Abrasive Paper is expected to grow at a CAGR of roughly 4.3% over the next five years, will reach 2640 million US\$ in 2023, from 2050 million US\$ in 2017, according to a new GIR (Global Info Research) study.
