Abstracts

The global Abrasive Water Jet Cutting Systems market size is expected to reach \$ 951 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

In 2025, global sales of Abrasive Water Jet Cutting Systems reached approximately 4,100?4,500 units, with an average market price of about USD 150000?165000 unit, an annual production capacity of roughly 4,500?4,900units, and an industry-average gross margin of approximately 35%.

An Abrasive Water Jet Cutting System is a CNC-based cold-cutting system that uses an ultra-high-pressure stream of water combined with abrasive media to generate a high-energy erosive jet for cutting metals, stone, glass, ceramics, composites, and other hard, heat-sensitive, or thick-section materials. Typical product forms include bridge, gantry, cantilever, enclosed compact, bevel/5-axis, and robotic-integrated systems. A complete machine normally combines a high-pressure pump, cutting head, abrasive delivery unit, motion platform, CNC control, and process software. The core value proposition of this equipment lies in no heat-affected zone, broad material compatibility, complex contour capability, and strong fit with high-mix, low-volume, precision, and value-added manufacturing environments.
