Abstracts

The global ABS Plastic Electroplating Equipment market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Plastic electroplating (POP) requires some special techniques due to the non-conductive nature of the substrate. And metal nickel plays a very important role in it. As early as the early 1960s, plastic electroplating was commercially limited and introduced to the European and North American markets. The main breakthrough that has led to good industry growth is the development of surface treatment chemical processes for acrylonitrile butadiene styrene (ABS), which has resulted in a good combination between plastic substrates and metal coatings. ABS makes plastics widely used for electroplating and the electroplated workpieces also have good quality.

This report studies the global ABS Plastic Electroplating Equipment production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for ABS Plastic Electroplating Equipment, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
