## Abstracts

According to our (Global Info Research) latest study, the global ABS Plastics market size was valued at USD 17130 million in 2023 and is forecast to a readjusted size of USD 23950 million by 2030 with a CAGR of 4.9% during review period.

ABS is a kind of polymer obtained through the copolymerization of three kinds of monomers, namely acrylonitrile, butadiene and styrene. Each of these three monomers has a specific property: the addition of acrylonitrile can improve the anti-corrosion and rigidity properties, butadiene promotes the shock resistance and styrene will contribute the material good fineness. It is among the low cost engineering plastic that is easy to machine and fabricate. ABS is an ideal material for structural applications when impact resistance, strength, and stiffness are required. It is widely used for machining pre-production prototypes such as the auto dashboard since it has excellent dimensional stability and is easy to paint and glue. Natural (beige) ABS and black ABS are FDA compliant for use in food processing applications. Besides, it is widely used in the toys and electron industries including the PC enclosure.

Currently, global production of ABS is relatively scattered as there are many manufacturers engaged in the industry. The largest manufacturers LG Chem, Formosa, CHIMEI, CNPC, Lotte Chemical, INEOS Styrolution, Toray, SABIC, JSR, Dagu Chemical, etc. and the top ten players account above 60% revenue market share in the world.
