## Abstracts

The global ABS Resins market size is expected to reach \$ 21980 million by 2029, rising at a market growth of 3.9% CAGR during the forecast period (2023-2029).

Global top 5 players of ABS resins are, LG Chem, Formosa, CHIMEI, CNPC and Lotte Chemical, with nearly a half market share. Among the giants in the industry, LG Chem makes up over 10%.

The largest market size held by Asia-Pacific, with a share over 70%, followed by Europe (10%) and North America (8%).

General purpose ABS and specialty ABS are two main types of the product, in which the dominant is general purpose ABS, with a share about 80%.

Micro DC motors has been widely used in automotive, household appliances, consumer goods and electronics. And the market of household appliances is the largest segment, with a market share of 30%.

ABS is a kind of polymer obtained through the copolymerization of three kinds of monomers, namely acrylonitrile, butadiene and styrene. Each of these three monomers has a specific property: the addition of acrylonitrile can improve the anti-corrosion and rigidity properties, butadiene promotes the shock resistance and styrene will contribute the material good fineness. It is among the low cost engineering plastic that is easy to machine and fabricate. ABS is an ideal material for structural applications when impact resistance, strength, and stiffness are required. It is widely used for machining pre-production prototypes such as the auto dashboard since it has excellent dimensional stability and is easy to paint and glue. Natural (beige) ABS and black ABS are FDA

compliant for use in food processing applications. Besides, it is widely used in the toys and electron industries including the PC enclosure.
