Abstracts

A rotary encoder, also called a shaft encoder, is an electro-mechanical device that converts the angular position or motion of a shaft or axle to an analog or digital code.

There are two main types: absolute and incremental (relative).

Absolute rotary encoders provide a distinctly coded numerical value for each shaft position. In positioning tasks in particular, the absolute encoders relieve the controller of computation tasks and keep costs down by eliminating the need for additional input components.

Moreover, reference runs when the machine is switched on or after power failures are no longer required as the current position value is available immediately. Parallel absolute encoders transmit the position value to the analyzing electronics through several parallel cables. Serial absolute encoders transmit their output data via standardized interfaces and protocols.

Scope of the Report:

This report focuses on the Absolute Rotary Encoders in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Absolute rotary encoders industry is relatively concentrated, manufacturers are mostly in the Japan, Europe and North America. Among them, Europe output value accounted for more than 45.71% of the total output value of global absolute rotary encoders in 2016. Heidenhain is the world leading manufacturer in global absolute rotary encoders market with the market share of 17.85%, in terms of revenue.

With the increasing in production capacity, expected that the absolute rotary encoders raw material price will be stable in the short term. However, the improvement of energy,

transportation costs, and labor costs, will play a significant role in promoting the cost of absolute rotary encoders.

There are companies aims at the cost and quality leadership which shall improve profitability. As the same time, companies are focusing on technological innovation, equipment upgrades, and process improvements, to reduce costs and improve quality. The worldwide market for Absolute Rotary Encoders is expected to grow at a CAGR of roughly 7.2% over the next five years, will reach 13100 million US\$ in 2023, from 8670 million US\$ in 2017, according to a new GIR (Global Info Research) study.
