## Abstracts

According to our (Global Info Research) latest study, the global Absorbable Antibacterial Suture market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Any wound, by and large, are may get contaminated at the time of closure. As a solution to this problem, an antibacterial suture is a surgical innovation which reduces the risk of Surgical Site Infection (SSI). Antibacterial sutures are coated with Antibacterial agents and other agents containing antibacterial properties. They may help in healing wounds faster by significantly reducing the risk of surgical site infections. Why do you need to use an antibacterial suture? We need to use antibacterial suture because bacteria are the leading cause of many types of infections in wounds. You can prevent these infections by covering the wound surfaces with a substance that kills them. An antibacterial suture (Absorbable) is a prosthetic implant into the wound, making it impossible for the bacteria to grow on the surface. You may then cover the wound with a bandage. In 2003, Ethicon, Inc., a Johnson & Johnson company, commercialized the first antimicrobial suture. The Centers for Disease Control and Prevention (CDC) recommends the use of triclosan-coated antimicrobial sutures to overcome bacterial adhesion and prevent surgical site infection.
