Abstracts

The global Absorbable Interface Screw market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

When used for internal fixation, it can be absorbed by tissue, eliminating the need for secondary removal surgery, thus reducing the risk of wound infection in patients; in addition, compared with traditional stainless steel or titanium alloy products, absorbable screws will not interfere with magnetic images and affect the patient. CT and nuclear magnetic examination results, so it has a good prospect of medical application.
