The global Absorbable Plain Gut Suture market size is expected to reach \$ 216.6 million by 2029, rising at a market growth of 6.2% CAGR during the forecast period (2023-2029).

The demand for absorbable plain gut sutures is closely linked to the number of surgical procedures performed. A growing global population and increased access to healthcare services have contributed to an overall rise in surgical interventions. Innovations in suture materials and manufacturing techniques have led to the development of absorbable sutures with improved tensile strength, handling characteristics, and absorption profiles. Surgeons and healthcare providers often prefer absorbable sutures for certain surgical applications as they eliminate the need for suture removal, reducing patient discomfort and potential complications. The trend toward minimally invasive surgical techniques may influence the types of sutures used, favoring smaller, absorbable sutures suitable for laparoscopic and endoscopic procedures.
