## Abstracts

According to our (Global Info Research) latest study, the global Absorbable Polymer Stents market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

According to material classification, absorbable scaffolds are mainly divided into two categories: absorbable polymer scaffolds and absorbable metal scaffolds. The former is mainly composed of L-poly(lactic acid) (PLLA), while the latter includes three types: magnesium alloy, iron alloy, and zinc alloy. Absorbable polymer scaffolds were the earliest to be commercialized, so there are many companies both domestically and internationally choosing this route. However, the mechanical properties of poly(lactic acid) are much lower than those of metal materials. To maintain sufficient support, it is necessary to make the scaffold thicker, the trabeculae wider, and the vascular coverage higher. Obstructing stent endothelialization, activating platelets, and promoting thrombosis, with limited specifications and inconvenient operation.

The Global Info Research report includes an overview of the development of the Absorbable Polymer Stents industry chain, the market status of The Treatment of Peripheral Blood Vessels Damaged (Surrounding Absorbable Stents, Coronary Artery Absorbable Stents), The Treatment of Peripheral Blood Vessels Blockage (Surrounding Absorbable Stents, Coronary Artery Absorbable Stents), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Absorbable Polymer Stents.
