According to our (Global Info Research) latest study, the global Absorbed Glass Mat (AGM) Battery market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Absorbed glass mat (AGM) battery is an advanced technology battery compared to lead- acid flooded battery. AGM batteries are constructed in such a way that the electrolyte is made to be suspended between the glass mat (primarily made of fiberglass) and battery plates. The amount of electrolyte is minimal in such batteries and it contains only enough electrolyte to keep the mat wets. If we compare traditional lead acid batteries with AGM batteries then AGM batteries are far more efficient because of its design and construction, better lifespan, resistance to vibrations, no spillage or leakage and more capacity.

Stringent CO2 emission norms and start-stop functions in all the cars manufactured by European automobile by 2023 is one of the key driver for Europe AGM battery market. Trucking industry has also now started using AGM battery since it requires minimal maintenance. Renewable energy systems like solar power completely depends on AGM batteries too and these factors are anticipated to strongly driver growth of the global AGM battery market. Higher AGM technology costs as compared to lead-acid battery could be a potential restraint for the global market of AGM battery.
