## Abstracts

The global Absorptive Coated Filters market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Absorptive coated filters are optical filters designed to selectively absorb or block specific wavelength ranges of light. It usually consists of one or more layers of absorbent material coated on a transparent base material. Absorptive coated filters work on the basis that absorbing materials have a high absorption capacity for specific wavelengths of light. When light passes through the filter, the absorbing material absorbs certain wavelength ranges of light while allowing other wavelengths to pass through.
