Abstracts

According to our (Global Info Research) latest study, the global Absorptive RF Switch market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

An absorptive RF switch is a type of electronic switch used in radio frequency (RF) circuits. It functions by absorbing energy from the unused input port to minimize reflection and signal loss.

In an absorptive RF switch, a termination resistor is included on the unused input port. This resistor absorbs any incoming signal that isn't directed to the output, preventing it from reflecting back into the circuit and causing interference. By reducing reflections and signal loss, absorptive RF switches help to maintain the integrity and quality of the transmitted or received signal.

Global 5 largest manufacturers of Absorptive RF Switch are Skyworks, Qorvo, Murata, NXP Semiconductors and Infineon, which make up about 64%. Among them, Skyworks is the leader with about 24% market share.
