An absorptive RF switch is a type of electronic switch used in radio frequency (RF) circuits. It functions by absorbing energy from the unused input port to minimize reflection and signal loss.

In an absorptive RF switch, a termination resistor is included on the unused input port. This resistor absorbs any incoming signal that isn't directed to the output, preventing it from reflecting back into the circuit and causing interference. By reducing reflections and signal loss, absorptive RF switches help to maintain the integrity and quality of the transmitted or received signal.
