Abstracts

According to our (Global Info Research) latest study, the global AC-DC Power Rectifier market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

AC-DC Power Rectifier are devices that convert AC power to DC power. They can be used to power devices and detect radio signals. Rectifiers can be made of vacuum tubes, pilot tubes, solid-state silicon semiconductor diodes, mercury arcs, etc. In contrast, a device that converts DC power to AC power is called an 'inverter' In the standby UPS, only the battery needs to be charged, and the load does not need to be powered, so there is only a charger. In a double-conversion UPS, this device not only supplies power to the inverter but also charges the battery, so it is called a rectifier / charger.
