The global Ac Electromagnet market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Ac electromagnet is a device that uses the magnetic field generated by AC current to generate magnetic force. It is usually composed of a coil and a soft iron core, and when the alternating current through the coil changes, a magnetic field is generated around the soft iron core, which makes the iron core magnetic, forming the effect of attracting or repelling other magnetic objects.
