## **Abstracts**

An AC motor is an electric motor driven by an alternating current (AC). The AC motor commonly consists of two basic parts, an outside stationary stator having coils supplied with alternating current to produce a rotating magnetic field, and an inside rotor attached to the output shaft producing a second rotating magnetic field.

### **Scope of the Report:**

This report focuses on the AC Motors in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Surging government initiatives & incentives coupled with mounting electricity consumptions is anticipated to drive the North American and European AC motors market. Additionally, several incentive programs in the U.S. and European countries for early replacement of low efficient electric motors may spur the demand for energy efficient AC motors. However, this region may not witness exponential growth owing to shifting of manufacturing plants of several motor vehicles and electronic appliances to Asian countries. However, Asia Pacific is expected to witness significant growth over the next few years owing to increasing purchasing power, continuous production of AC motor-driven applications, and developing economies in India, China, Malaysia, and Indonesia.

The worldwide market for AC Motors is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
