## Abstracts

The Servo Controller Is The Core Of The Servo System. The Servo Controller Performs Two Types Of Tasks: Tracking Some Command Inputs And Improving The Interference Suppression Ability Of The System. Pid Control Is One Of The Most Powerful Control Methods, Which Represents Proportional Integral Differential Control. Pid Control Is A Combination Of Proportional Control, Integral Control And Differential Control. Pid Control Method Works On The Error Signal, Which Is The Difference Between The Command Value And The Actual Value Of The Output Variable, And Drives The Error To Zero. The Proportional Value Can Be Considered As A Simple Gain Value. The Integral Value Integrates The Error Over A Period Of Time And Helps To Drive The Error To Zero. Differential Values Help Stabilize Systems That Use Only Integral And Proportional Terms
