AC V2G (Vehicle-to-Grid) charging piles are charging stations for electric vehicles (EVs) that use Alternating Current (AC) for both charging and discharging. In a V2G scenario, the AC V2G charging pile can receive energy from the grid and store it in the battery of the connected electric vehicle, and then discharge the energy back to the grid when needed. This allows EVs to provide grid services, such as demand response and frequency regulation, by acting as mobile energy storage units. AC V2G charging piles typically use Level 2 charging technology, which provides a slower and more controlled charging process compared to DC fast charging. This makes AC V2G charging piles well suited for use in residential and low-power commercial settings, where fast charging is not a priority. AC V2G charging piles play an important role in facilitating the integration of renewable energy sources into the grid and improving the overall energy efficiency of the power system.
