## **Abstracts**

Access control and authentication are the numerous measures, which can be either electronic or physical, designed for monitoring of objects and people, and controlling access to and precluding intrusion of any information or property. The primary objective of access control and authentication is to restrict physical access of any unauthorized person in controlled facility. These systems are the security devices that control the access of resources in the operating system. Also, access control and authentication systems are the significant tools used for investigating or preventing crimes which may take place in public places such as multiplexes, shopping malls, airports, casinos, banks, ATMs and other such places. Security requires cost expenditure and has some drawbacks that restrict it from eliminating the risks entirely.
