Abstracts

According to our latest research, the global Account Based Ticketing market size will reach USD million in 2030, growing at a CAGR of % over the analysis period.

Account Based Ticketing (ABT) is a system that can open up new opportunities and business models, provide access to new markets that were previously out of reach, and provide a platform to address the reduction in the ongoing costs associated with card issuance, as well as system management and maintenance.

The Account Based Ticketing market report provides a detailed analysis of global market size, regional and country-level market size, segmentation market growth, market share, competitive Landscape, impact of domestic and global market players, value chain optimization, trade regulations, recent developments, opportunities analysis, strategic market growth analysis, product launches, area marketplace expanding, and technological innovations.

ABT can help build a future in which smart ticketing and frictionless travel are the rule, rather than the exception. In such a future, transit systems will automatically charge passengers the most appropriate fare based on a best value calculation. This is often referred to as the concept of a “best fare promise,” with the system always selecting the cheapest ticket for passengers – saving customers money by automatically buying a weekly, monthly, or annual season ticket rather than a lot of singles or returns. Beyond cost savings, an ABT implementation offers passengers a flexible travel experience, allowing them to conveniently alter travel routes on-the-fly. Last, but certainly not least, ABT eliminates the demand for “exact fare” on bus journeys.
