The global AC/DC Board Mount Power Supply market size is expected to reach \$ 3072 million by 2032, rising at a market growth of 4.1% CAGR during the forecast period (2026-2032).

AC/DC Board Mount Power Supply is a compact power conversion unit designed to be installed directly onto a printed circuit board to transform alternating current input into regulated direct current output for embedded electronic systems. It functions as an integrated onboard power source that supports reliable operation of electronic circuits within industrial, medical, communication, instrumentation, and building control equipment. These power supplies are engineered to deliver electrical isolation, voltage regulation, thermal stability, and long operational life while minimizing occupied board space. They are typically available in encapsulated or open-frame formats and are selected to meet application requirements related to power density, efficiency, safety compliance, and environmental durability. The unit price for AC/DC board mount power supplies typically falls within the range of a few tens of dollars, while the industry gross margin generally lies between 30% and 50%.

The upstream supply chain for AC/DC Board Mount Power Supplies includes suppliers of semiconductors, transformers, magnetic cores, capacitors, resistors, inductors, switching controllers, PCB materials, thermal management components, connectors, and encapsulation materials. Manufacturers combine these components through power electronics design, assembly, testing, and certification processes to create compact board-level power solutions. Midstream participants include specialized power module producers and contract manufacturing partners responsible for module integration and quality assurance. Downstream demand comes from industrial automation systems, medical devices, communication equipment, smart metering infrastructure, security

systems, consumer electronics, and embedded control platforms. Equipment manufacturers integrate AC/DC board mount power supplies directly into electronic assemblies to simplify system architecture, reduce external wiring requirements, and improve product reliability and space efficiency.
