Acesulfame potassium, also known as AK sugar, looks like a white crystalline powder. It is an organic synthetic salt with a taste similar to that of sugar cane. It is easily soluble in water and slightly soluble in alcohol. Acesulfame potassium has stable chemical properties and is not prone to decomposition and failure. It does not participate in body metabolism and does not provide energy. It has high sweetness and is cheap. It is non-cariogenic and has good stability to heat and acid. It is the fourth generation in the world. Synthetic sweeteners. It can produce a strong synergistic effect when mixed with other sweeteners, and can increase sweetness by 20% to 40% at general concentrations.
