The Acetate Frame is a polymeric composite made from plant-derived cellulose, chemically modified to form a lightweight, flexible, and moldable material for eyewear and protective goggles. By blending cellulose with plasticizers, it achieves a semi-transparent or solid matrix that balances rigidity and elasticity, enabling shape retention while resisting breakage from bending or impacts. Manufactured via injection molding or thermoforming, the frame supports intricate designs (e.g., rimless perforations, geometric faceting) and personalized 3D printing. Its surface is treated with anti-smudge coatings to repel fingerprints and oils, ensuring easy cleaning. Derived from renewable resources and recyclable, acetate frames align with eco-friendly practices. They are widely used in fashion glasses, sports goggles, and smart wearables (e.g., AR glasses), combining aesthetic appeal, comfort, and sustainability as an upgrade from conventional plastic frames.
