According to our (Global Info Research) latest study, the global Acid Citrate Dextrose (ACD) Tubes market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

ACD or acid citrate dextrose is a solution of sodium citrate, citric acid and dextrose in water which is primarily used as an anticoagulant to preserve blood specimen. ACD tubes are specialized tubes utilized to preserve the whole blood specimen for future testing purpose. There are several types of acid citrate dextrose tubes available in the market. ACD tubes are primarily utilized in hospitals, clinics and diagnostics centers worldwide.

Geographically, North America and Europe contribute to the maximum share for ACD tubes owing to increasing awareness for safe blood storage, blood transfusion, rise in geriatric population and better health care standards. These regions have better reach to technological advancements and can invest resources in procuring the best health care solutions. Over the forecast period Asia Pacific region is expected to have the fastest growth for these devices due increase in public and private health care expenditure to meet global standards coupled with increase in awareness about hygiene factors in blood transfusion and blood preservation is a major driver in Asia-Pacific region. Technological advancements and increase in health care spending will reduce the affordability constraint and further accelerate the adoption of ACD tubes across health care facilities, diagnostic centers and clinics in Latin America, the Middle East and Africa.
