Abstracts

According to our (Global Info Research) latest study, the global Acid Fracturing Thickener market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Acid fracturing thickener is mainly used in the development of carbonate reservoir. Due to the development of pores and fractures in carbonate reservoirs and the high formation temperature, it is necessary to improve the penetration depth of acid pressure fractures in the reservoir and improve the conductivity of acid corrosion fractures to ensure the effect of acid pressure transformation. Therefore, adding thickening agents to the acid fracturing system can delay the reaction speed between acid fluid and formation rocks, improve the swept efficiency, improve the sand carrying capacity, reduce the filtration loss, and achieve the purpose of increasing production and injection.

The product has good thermal stability and shear rheology, good filtration loss reduction, excellent compatibility, and most corrosion inhibitors, demulsifier, iron ion stabilizer, anti-swelling agent and so on good compatibility, soluble in water and acid. At the same time, the acid viscosity is large, which effectively reduces the reaction rate between acid and carbonate rock formation, increases the acid treatment radius, improves the acidification effect and improves the oil recovery.
