## Abstracts

The global Acid Protease Feed Additive market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The acid protease feed additive has the characteristics of improving protein utilization, promoting feed digestion, improving feed quality, and reducing environmental pollution. It is especially suitable for feed raw materials containing high fiber and anti-nutritional factors. During using, the dosage and usage method of additives should be reasonably determined based on factors such as animal breed, age, feed formula to ensure that they function safely and effectively.

The acid protease feed additive is an enzyme additive used in feed. Its main component is acid protease. The acid protease is an enzyme that can function in an acidic environment. It can effectively degrade protein in feed and improve protein utilization and animal digestion and absorption capabilities.
