## Abstracts

The global Acid Regeneration Plant (ARP) market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Through the acid regeneration technology of hydrochloric acid regeneration equipment, the entire cycle is closed. Spent acid from the pickling line is regenerated and then used to meet the demand for fresh acid. In addition, most of the wastewater from the pickling line can be eliminated, thus saving the cost of the entire pickling process and minimizing the impact on the environment.
