Acidic detergents are a category of cleaning formulations with a pH below 5.0, primarily designed to remove inorganic deposits such as limescale (calcium carbonate), rust (iron oxides), mineral stains, and other alkaline-soluble residues through neutralization and dissolution reactions facilitated by hydrogen ions released from acidic components. In 2025, global acidic cleaning agents production reached approximately 7,214K ton, with an average global market price of around USD 1,200 per ton. A factory gross profit of USD 300 per ton with 25% gross margin. A single line full machine capacity production is around 150K ton per line per year. The upstream is dependent on mineral acid production and organic acid manufacturing, downstream demand is concentrated in manufacturing, oil and gas and water treatment. Steel manufacturers utilize hydrochloric acid cleaners to remove mill scale and oxidation before galvanizing and coating operations to improve coating adhesion and corrosion resistance. China leads driven by food industry expansion and increasing food safety standards.
