Acidic Color Fixing Powder is a chemical widely used in the textile printing and dyeing industry. It is mainly used for color fixation after dyeing with acid dyes to improve the wet fastness (such as washing fastness, perspiration fastness, etc.) and color light stability of dyed fabrics. It can effectively prevent the dye from falling off during subsequent treatment or use, ensuring a long-lasting dyeing effect. Acidic color fixing powder usually includes polymerized phenolic resins, sulfonate condensation products and other high molecular weight compounds, which have good water solubility and stability, can be quickly dissolved in water and evenly distributed on the fabric. At the same time, they have little effect on color light and light fastness, and can maintain the original color of the dyed fabric.
