According to our (Global Info Research) latest study, the global Acidulants market size was valued at USD 2359.1 million in 2023 and is forecast to a readjusted size of USD 3096.2 million by 2030 with a CAGR of 4.0% during review period.

Acidulants is a chemical compound commonly used as food acids and used as a food additive that gives a sharp or tart taste to food and beverages. Acidulants are also acted as a food preservative and inhibit the growth of the microbes. Acidulants control the acidity and pH of the food and beverage and also regulate flavor, color and moisture levels in food such as dairy products, meat, seafood, and candies. The acidulants can be organic, mineral acids, neutralizing agents, and buffering agents or bases. The acidulants selection depends upon the application of processed food. The Acidulants possesses the properties such as flavoring agent, preservatives, chelating agent, buffer, gelling agent and coagulating agent and used in various applications which boost the demand of the acidulants worldwide.

The global acidulants market is expected to register a significant CAGR over a forecast period as the demand of the acidulants is increasing from the food processing industry across the world. The consumption of the acidulants is increased as it acts as a preservative in food and beverages and can be the alternative to the cold supply chain, which boosts the demand of the acidulants market and drives the global acidulants market. Acidulants are working as a flavoring agent and gelling agents for the food products such as jam and candies and maintains pH and acidity in beverages and also drives the demand of the acidulants market.
