Acne, also known as acne vulgaris, is a long-term skin condition that occurs when dead skin cells and oil from the skin clog hair follicles. Typical features of the condition include blackheads or whiteheads, pimples, oily skin, and possible scarring. It primarily affects skin with a relatively high number of oil glands, including the face, upper part of the chest, and back. The resulting appearance can lead to anxiety, reduced self-esteem, and, in extreme cases, depression or thoughts of suicide

The Acne Skin Medication Market is driven by the widespread occurrence of acne and the desire for effective treatments. These medications offer solutions for individuals seeking to manage and alleviate acne-related skin issues. However, a significant challenge is the need for products that not only effectively treat acne but also have minimal side effects and are suitable for various skin types. Regulatory compliance and safety standards pose challenges for manufacturers.
