Abstracts

Acoustic distributed strain sensing systems based on Rayleigh scattering use fiber optic cables to provide distributed strain sensing. In DAS, the fiber optic cable becomes the sensing element and is measured and partially processed using additional optoelectronic equipment. Such systems allow the detection of audible strain signals over long distances and in harsh environments.

According to our (Global Info Research) latest study, the global Acoustic Distributed Strain Sensing System market size was valued at US$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
