Acoustic emission testing technology is a non-destructive testing method, which can track and monitor the performance status of the tested material in real time, including the quality, strength and fatigue degree of the material. Acoustic emission testing equipment can judge the performance status of the material by analyzing the acoustic signal of the material, so as to take early measures when problems are found to ensure the safe and stable operation of the equipment.
Acoustic Emission (AE) Inspection Equipment is a kind of equipment used to monitor the defects and damages of mechanical structures and materials. It uses the acoustic signal generated by objects under stress loading to detect internal defects and damages of materials. It can detect from tiny cracks, corrosion to serious damage, and is widely used in aviation, aerospace, machinery manufacturing, energy, transportation and other fields.
