The global Acoustic Emission Testing (AET) Equipment market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Acoustic Emission Testing (AET) is a non-destructive testing (NDT) method that is used to evaluate the integrity of materials, components, or structures. It detects transient elastic waves, or acoustic emissions, that are generated by a rapid release of energy within the material. These emissions are typically caused by phenomena such as crack formation and growth, dislocations, and other deformations within a material.

This report studies the global Acoustic Emission Testing (AET) Equipment production, demand, key manufacturers, and key regions.
