An acoustic floating floor is a type of flooring system designed to reduce noise transmission between floors in a building. It typically consists of a layer of soundproofing material, such as cork or rubber, that is installed between the subfloor and the finished flooring material. This helps to absorb impact noise and vibrations, preventing them from traveling through the floor and disturbing occupants in the rooms below. Acoustic floating floors are commonly used in multi-story buildings, such as apartments, hotels, and office buildings, to improve sound insulation and create a more comfortable living or working environment.

The Acoustic Floating Floor market is experiencing a growing trend in various regions across the globe, with major sales concentrated in North America, Europe, and Asia Pacific.
