Abstracts

According to our (Global Info Research) latest study, the global Acoustic and Soundproof Insulation Materials market size was valued at US\$ 6438 million in 2025 and is forecast to a readjusted size of US\$ 9130 million by 2032 with a CAGR of 5.1% during review period.

Acoustic and soundproof insulation materials are engineered products used to reduce noise by absorbing, damping, decoupling, or blocking airborne and structure-borne sound, typically combining porous absorbers, limp-mass barriers, resilient layers, and sealing systems to improve Sound Transmission Class (STC), Noise Reduction Coefficient (NRC), and vibration isolation performance in buildings, vehicles, and equipment.

Upstream suppliers provide petrochemical feedstocks (PU, PVC, rubber, bitumen), mineral inputs (basalt, glass cullet, silica), fibers, binders, fire retardants, and facing films; midstream converters melt-spin or foam and convert into batts, boards, felts, barriers, damping sheets, and composite laminates, then perform coating, laminating, slitting, and packaging while meeting fire, VOC, and acoustic standards; downstream channels include building-material distributors, OEM tier suppliers, and contractors who specify, install, and certify systems for residential, commercial, industrial, and transportation projects, supported by testing labs and code consultants.

Ongoing and planned projects typically include new or expanded mineral wool and fiberglass lines (higher melt capacity, electric boosting, cullet use), nonwoven acoustic felt plants using recycled polyester or textiles, new calendering/extrusion lines for mass-barrier and damping sheets, and downstream converting hubs near major construction

or automotive clusters to shorten lead times; investments often target low-VOC binders, higher fire ratings, lightweight composites, and automated cutting/packaging, while regional capacity additions track housing starts, green building codes, infrastructure retrofits, and transportation electrification that shifts NVH requirements.
