According to our (Global Info Research) latest study, the global Acoustic Pyrometer System market size was valued at US\$ 46.4 million in 2024 and is forecast to a readjusted size of USD 65.7 million by 2031 with a CAGR of 5.2% during review period.

A thermometer that uses the proportional relationship between the square of the speed of sound in an ideal gas and the thermodynamic temperature to measure the thermodynamic temperature is called an acoustic thermometer, also known as a dynamic gas thermometer.

Acoustic pyrometers are used in a wide range of applications, including steel, chemical, electric power, medical and other fields. In the steel industry, acoustic pyrometers are widely used to measure temperature in high-temperature furnaces, which can effectively improve production efficiency and product quality. Among acoustic pyrometers, acoustic temperature measurement technology can be used to measure the surface temperature of the human body, which is of great significance for the diagnosis and treatment of diseases. In the future, the application fields of acoustic pyrometers will continue to expand.
