## Abstracts

The global Acousto-Optical Tunable Filter market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The acousto-optic tunable filter is a solid-state, electronically addressable and random access optical passband filter. It uses the propagation of ultrasonic waves in the crystal to change the refractive index in the crystal, thereby achieving frequency-selective filtering of light. Diffraction occurs when certain matching conditions are met between the sound beam and the light beam. It can be used to quickly and dynamically select specific wavelengths from a broad spectrum.
