Acrylic hot bending machine?, also known as acrylic bending machine, is a device used to bend and shape plastic sheets such as acrylic after heating and softening. It works by softening the sheet through heat and then bending it into the desired shape through mechanical force. Acrylic hot bending machines usually use infrared heating, which has fast heating speed and adjustable temperature within a certain range. The maximum temperature can reach 600 degrees. A water circulation cooling system is used to ensure that the sheet will not overheat during processing. The equipment has a leakage protection function to ensure safe operation. It is not only suitable for acrylic sheets, but also for hot bending processing of plastic sheets such as plexiglass, PC, and PVC.
