## Abstracts

The global Acrylic Emulsion Mortar market size is expected to reach \$ 862 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

In 2025, the global production of acrylic emulsion mortar was approximately 720,000 tons, with an average selling price of around US\$860 per ton. The capacity of a single production line is approximately 20,000-30,000 tons per year, with an average gross profit margin of about 10-20%. Acrylic emulsion mortar is a high-performance repair and waterproofing material made by modifying cement mortar with acrylic ester copolymer emulsion. It combines the durability of cement with the flexibility of polymers, possessing excellent adhesion, crack resistance, waterproofing, impermeability, and corrosion resistance. It is widely used in the repair and reinforcement of concrete structures, anticorrosion, and waterproofing (such as reservoirs, tunnels, bridges, basements, and chemical facilities).

The upstream raw materials for acrylic emulsion mortar mainly include acrylic emulsion/redispersible polymer powder, cement, graded quartz sand/powder, and various functional chemical additives (such as water reducers, defoamers, and water retention agents). The price and supply stability of these raw materials directly affect its cost and performance. Its downstream applications are extensive, primarily focusing on the repair and reinforcement of infrastructure (such as bridges, dams, and roads), anticorrosion and protection of industrial buildings (such as chemical workshops and sewage treatment tanks), waterproofing and bonding in civil buildings (such as basements, roofs, and tile bonding), and special engineering fields with extremely high material durability requirements, such as marine engineering and nuclear power. Market demand is closely related to national infrastructure construction and maintenance investment.

This report studies the global Acrylic Emulsion Mortar production, demand, key manufacturers, and key regions.
