Acrylic film formers are functional polymer materials produced through the polymerization of acrylic monomers that form continuous, uniform, and strongly adherent films upon solvent evaporation or curing. In 2025, global acrylic film formers production reached approximately 776,050 ton, with an average global market price of around USD 4,000 per ton. A factory gross profit of USD 1,200 per ton with 30% gross margin. A single line full machine capacity production is around 5,000 ton per line per year. The upstream is dependent on acrylic monomers, methacrylic acid and surfactants. The downstream demand is concentrated in paints and coatings, adhesive and sealants and personal care and cosmetics. Acrylic film formers used as Ink and overprint varnish formulations due to the film integrity, printability, gloss and block resistance. China market is leader in production and consumption. India market is driven by massive automotive and architectural coating sectors.
