Abstracts

The global Acrylic Grouts market size is expected to reach \$ 842 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

Acrylic Grouts are chemical grouting materials based on acrylate or methacrylate monomer systems, typically injected via metered multi-component pumps and polymerizing in a controllable timeframe into hydrophilic, flexible, water-swallowable gels; their ultra-low viscosity, high penetrability, and adjustable gel time enable effective permeation into fine cracks, joints, and soil pores, making them well suited for sewer infiltration control, underground waterproofing, permeation/curtain grouting, and ground stabilization. In 2025, global Acrylic Grouts sales is about 70 kilotons per year, with an average ex-works price of approximately US\$ 8,500 per ton, installed capacity around 110 kilotons per year, and a materials gross margin typically in the range of 30%–42%.

The value chain runs from acrylate/methacrylate monomers and initiator/accelerator additives upstream, through midstream formulation and kitted manufacturing, to downstream on-site injection by municipal sewer rehabilitation, underground construction, and ground-improvement contractors using metered grouting equipment.

This report studies the global Acrylic Grouts production, demand, key manufacturers, and key regions.
