## Abstracts

According to our (Global Info Research) latest study, the global Acrylic Grouts market size was valued at US\$ 612 million in 2025 and is forecast to a readjusted size of US\$ 842 million by 2032 with a CAGR of 4.7% during review period.

Acrylic Grouts are chemical grouting materials based on acrylate or methacrylate monomer systems, typically injected via metered multi-component pumps and polymerizing in a controllable timeframe into hydrophilic, flexible, water-swallowable gels; their ultra-low viscosity, high penetrability, and adjustable gel time enable effective permeation into fine cracks, joints, and soil pores, making them well suited for sewer infiltration control, underground waterproofing, permeation/curtain grouting, and ground stabilization. In 2025, global Acrylic Grouts sales is about 70 kilotons per year, with an average ex-works price of approximately US\$ 8,500 per ton, installed capacity around 110 kilotons per year, and a materials gross margin typically in the range of 30%–42%.

The value chain runs from acrylate/methacrylate monomers and initiator/accelerator additives upstream, through midstream formulation and kitted manufacturing, to downstream on-site injection by municipal sewer rehabilitation, underground construction, and ground-improvement contractors using metered grouting equipment.
