## Abstracts

Acrylic sulphonated polymers are readily formulated into overprint inks and varnishes to impart alkaline resistance, water resistance, rub resistance and high gloss. They also can be integrated into barrier coatings for paper and paperboard products, improving water resistance, oil and grease. These polymers provides a different combination of two different polarities a weakly anionic carboxylate group which provides scale inhibition action and effective dispersion & a strongly anionic sulphonated group delivers iron tolerance and high water hardness to the polymer.
