Abstracts

Acrylic surface coatings are fast-drying paints comprising pigments suspended in acrylic polymer emulsion. These coatings are made up of a methacrylic or acrylic polymer that possesses strong color retention property. Acrylic coatings are soluble in water; however, they become water-resistant in the dry state. Different technologies used in acrylic surface coatings include waterborne coating, solvent-borne coating, and powder coating. Acrylic surface coatings are characterized by properties such as high surface hardness and elastomeric finish when applied as roof coating on buildings.
