The global Acrylonitrile Butadiene Styrene (ABS) Polymer for 3D Printing market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Acrylonitrile Butadiene Styrene (ABS) copolymer is a type of thermoplastic that is commonly used in 3D printing. It is composed of three different monomers: acrylonitrile, butadiene, and styrene.

ABS copolymer has several desirable properties that make it a popular material for 3D printing. It is strong, durable, and resistant to impact and heat, making it suitable for a range of applications. ABS copolymer also has good chemical resistance and can be easily molded and machined.

In 3D printing, ABS copolymer is typically used in the form of a filament, which is fed into a 3D printer and melted down to create the desired object. ABS copolymer has good layer adhesion, allowing for the creation of complex and detailed objects with high dimensional accuracy.

One potential drawback of ABS copolymer is that it can emit fumes during printing, which can be unpleasant or even harmful if proper ventilation is not used. It is also prone to warping during printing, especially when printing larger objects.
